

IN THE ABSTRACT:

Applicant has provided herewith a replacement abstract on a separate sheet.

The original abstract has been amended as follows:

~~The invention relates to the field of playthings, A construction sets, etc., set~~
assembled using connective non-adhesive elements. ~~The essence of the invention:~~
~~a meccano containing~~ construction set includes connective elements and various
polygonal formative parts with coupling elements configured as rectilinear sides
with a length in the nominal of modular and/or modular-derivative size with the
coupling elements configured as rectilinear sides with a length in the nominal of
modular and/or modular-derivative size, the connective elements being configured
as a group of links having different fixed ~~angle~~ angles of mutual disposition of the
formative parts to be connected. The technical result that can be accomplished ~~in~~
~~implementing the invention~~ consists in creating a game environment requiring
foreseeing a non-obvious result of subsequent several couplings and conscious
selection for this purpose of appropriate formative parts and connective elements.
